RESPONSE AND SURRENDER OF ORIGINAL LETTERS PATENT

Mail Stop Non-Fee Response
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

March 26, 2004

Sir:

In response to the Office Action March 22, 2004, the following remarks are respectfully submitted in connection with the above-identified application together with the surrender of the Original Letters Patent.

The indication that claims 1-11 are allowed and this reissue is in condition for allowance except for surrender of the original patent, is acknowledged.

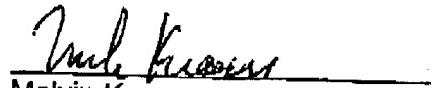

Applicants surrender herewith the Original Letters Patent, which is the only outstanding issue in this application, and submit that the informality noted by the Examiner has been overcome. Accordingly, issuance of a Notice of Allowance is respectfully requested.

To the extent necessary, applicant's petition for an extension of time under 37 CFR 1.136. Please charge any shortage in the fees due in connection with the filing

The Commissioner of Patents
and Trademarks

Has received an application for a patent for a new and useful invention. The title and description of the invention are enclosed. The requirements of law have been complied with, and it has been determined that a patent on the invention shall be granted under the law.

Therefore, this

United States Patent

Grants to the person or persons having title to this patent the right to exclude others from making, using or selling the invention throughout the United States of America for the term of seventeen years from the date of this patent, subject to the payment of maintenance fees as provided by law.

Harry F. Manbeck, Jr.

Commissioner of Patents and Trademarks

[57] ABSTRACT

Disclosed is an optical recording and reproducing apparatus comprising a light source directing a light spot toward a recording medium, a detection system detecting light reflected from the recording medium to derive an electrical signal from the reflected light, an information processing circuit modulating the intensity of the light spot according to writing pulses to record information on the recording medium and using the electrical signal to reproduce information from the recording medium, and a tracking servo circuit carrying out tracking servo operation on the basis of the electrical signal and including an extracting circuit connected to a source of extracting pulses having a pulse width at least equal to the writing pulse width so that writing pulse parts contained in the electrical signal are extracted during recording information, whereby a track offset occurring during information recording can be minimized, and the stability of the tracking servo system can be improved.
